Dissemination level: PU  
Document version: 1  
Date of preparation: 10.02.2005

## **Summary**

The structure and content of a database on organisations working in the hydrogen industry have been created. This database, containing 1000 companies and institutions, is the first milestone (month 11) of annual deliverable D17 under sub-task 15.2 of Workpackage 15 (e-Academy). The database was used to determine the level of interest in hydrogen safety education to quantify a market of potential trainees as an exercise. A questionnaire was sent to 600 companies and institutions contained in the database. Analysis of the replies from 28 respondents indicates that 119 potential trainees would be interested in hydrogen safety education on an annual basis. This implies that a projected market of 5000 companies and institutions would yield 1000 trainees. As a result, it will be necessary to deploy educational/training programmes at a number of universities throughout Europe. Further analysis indicates that the relative interest in the various teaching modes is as follows. Postgraduate Certificate (PGC): 4.87%, Postgraduate diploma (PGD): 0.67%, Master of Science (MSc): 13.28%, Short Course (SC): 19.16%, and Continuous Professional Development (CPD): 7.39%.

# 1. Introduction

The purpose of this report is to accompany the database on organisations working in the hydrogen industry, annual deliverable D17 in month 11 under sub-task 15.2 of Workpackage 15 (e-Academy). The database on organisations working in the hydrogen industry is instrumental in reaching the objectives of subtask 15.3, namely, to form a market of potential trainees and to disseminate results of mutual activities of the network. While the second objective is fairly straightforward to reach (all that is needed is a list of company addresses, emails, etc.), the first objective requires some further clarification.

To form a market of potential trainees it turns out to be necessary to undertake the following steps:

- **To determine the level of interest in hydrogen safety education.** The level of interest in hydrogen safety education depends primarily on the number of organisations and people involved in hydrogen related activities.
- **To determine the employment pattern of people working in hydrogen related areas.** Once the level of interest in hydrogen safety education is known, it becomes important to resolve the employment pattern. This, to assess the skill set sought by employers.
- **To determine the preferred teaching modes of education in hydrogen safety.** This is the most critical step because of the transitional nature of the emerging hydrogen economy. The use of hydrogen as an energy carrier instead of today's fossil-fuel based ones is expected to spark the development of new technologies and to bring unprecedented safety issues to the surface. Because of this, the skill set sought by employers will change with time. It is furthermore anticipated that the primary university education which provides the graduate with sufficient skills to qualify for the first employment, and to possess the ability to acquire further skills in the later stages of the professional life, might no longer be sufficient. Short courses and continuous professional development courses are considered to be of vital importance to avert this situation.

A database of organisations working in the hydrogen industry, containing 1000 organisations at the time of this writing. To gather information relevant to the aforementioned steps, a questionnaire was sent out to 600 companies (the database contained 600 companies at that time). The structure of the database and questionnaire, as well as an analysis of the catchment population in the light of the aforementioned steps shall be presented in the following sections.

## 2. The database on organisations working in the hydrogen industry

The database was developed under Microsoft Access 2003 and contains 1000 companies and institutions at the time of this writing. Information on these companies/institution is accessible through a data form (see Figure 1). Each row on the data form contains information of a single company/institution and consists of nine fields containing the record number, the company/institution name, the company/institution address, the city/area where the company/institution is located, the postal code, country where the company/institution is located, the telephone/fax number, the email address, and the company/institution home-page. These fields are linked to records contained in a linked table.

Num	ComplstName	Address	CityArea	PostalCode	Country	Tel/Fax	Email

10	Volvo Technology	Chalmers Teknikpark	Gothenburg	412 88 Gothenburg	Sweden	+46 (0)31 772	Paul.Adams@

Figure 1. The data form (this form was designed by Alexander Lelyakin).

Each record in the linked table contains 25 fields: 1 field to store the record number, 10 fields to store company/institution information, 8 fields to store information on the employment pattern in hydrogen related areas, and 6 fields containing the level of interest in hydrogen safety education and the preferred teaching modes. Appendix A of this document contains an export of the information contained in the database in semicolon delimited text format. Dataforms are stored consecutive records. Each record has the format:

Record: **Record number; Company or institution; Address; City and or area; Postal code; Country; Telephone and fax; Email; Url; Number of employees; Contact person; Number of employees working in hydrogen; Percentage in design;**

**Percentage in manufacture; Percentage in legislation; Percentage in maintenance; Percentage in installation; Percentage in research; Percentage in teaching; Number of people for hydrogen safety education per year; Percentage for postgraduate certificate (PGC); Percentage for postgraduate diploma (PGD); Percentage for master of science (MSc); Percentage for short course (SC); Percentage for continuous professional development (CPD)**

### **3. The questionnaire and analysis of the catchment population**

As stated in the Introduction, a questionnaire (see Figure 2) was sent out to 600 companies and institutions contained in the database. There were 28 responses and this catchment population was analysed to resolve the employment pattern of organisations working in hydrogen related areas, and to determine the level of interest in the various teaching modes of hydrogen safety education. This analysis shows that 838 people are working in hydrogen related areas within 28 companies/institutions and that 119 people would be interested in hydrogen safety education on an annual basis. The distributions of the employment pattern and preferences for teaching modes in hydrogen safety education are shown in Figures 3 and 4, and Table 1.

**Table 1. Employment pattern and interest in hydrogen safet education.**

Employment pattern		Interest in HSE	
design	1.31%	PGC	4.87%
manufacture	13.02%	PGD	0.67%
legislation	0.92%	MSc	13.28%
maintenance	0.44%	SC	19.16%
installation	1.07%	CPD	7.39%
research	19.03%		
teaching	19.03%

**Assessment of the demand for education**  
**on Hydrogen Safety Engineering**

Title/Name: .....  
Company/Institution: .....  
Address: .....  
City/Area: .....  
Post code: .....  
Country: .....  
Telephone: .....  
Fax: .....  
E-mail: .....  
URL: .....  
No. of employees: .....

1. Is your company/institution involved in the hydrogen industry or in hydrogen-related activities?

Yes  No

2. How many people in your company/institution are involved in hydrogen related activities?

1-10  11-100  101-1000  1000-10000  More than 10000

3. How would you categorise your company involvement in hydrogen related activities?

% in design       % in manufacture       % in legislation  
 % in maintenance       % in installation       % in research  
 % in teaching

4. How many people in your company/institution would be interested in education on Hydrogen Safety Engineering each year?

1-10  10-20  20-50  50-100  More than 100

5. What is the most beneficial for your company/institution in terms of continuous professional development of its employees?

% Postgraduate Certificate       % Postgraduate Diploma  
 % Master of Science       % Short courses  
 % CPD (continuous professional development) course

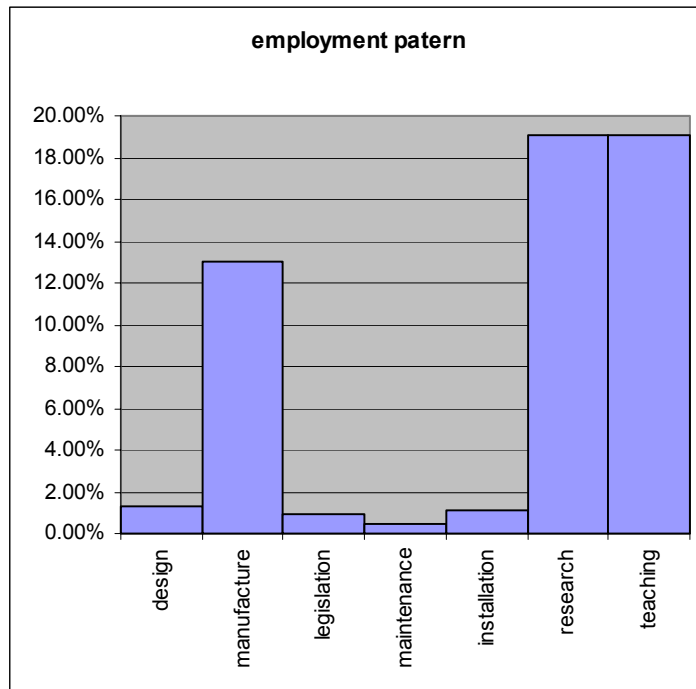

*Thank you for your cooperation!*

**Figure 2. The questionnaire.**

**Figure 3. Employment patern based on 838 people within 28 companies/institutions.**

**Figure 4. Interest in hydrogen safety education based on 119 people within 28 companies/institutions.**

## 4. Conclusion

A database containing 1000 organisations working in the hydrogen industry has been created. The database was used to analyse the employment pattern of people working in the hydrogen industry. A questionnaire was sent out to 600 companies and institutions (the database contained 600 organisations at that time). Responses were received from 28 recipients. Analysis of this catchment population reveals the following.

- There are 838 employees active in hydrogen related areas within these 28 companies/institutions. The employment pattern appears to be: 1.31% in design, 13.02% in teaching, 0.92% in legislation, 0.44% in maintenance, 1.07% in installation, 19.03% in research and 19.03% in teaching.
- Within these 28 companies/institutions there exists a market of 119 potential trainees on an annual basis. The relative interest in the various teaching modes of hydrogen safety education is as follows: Postgraduate Certificate (PGC): 4.87% , Postgraduate diploma (PGD): 0.67%, Master of Science (MSc): 13.28%, Short Course (SC): 19.16%, and Continuous Professional Development (CPD): 7.39%.

These findings imply that a projected market of 5000 organisations working in hydrogen related areas would yield 1000 trainees. To meet this demand for hydrogen safety education it will be necessary to deploy educational/training programmes at a number of universities throughout Europe. Although the catchment population is still small, further analysis indicates that postgraduate short courses are the most preferred teaching mode for hydrogen safety education.

## 5. Future work

The database will be increased from 1000 to at least 2000 organisations in months 12 to 23. This will be performed by partner WUT in year 2. (1<sup>st</sup>-year UU, 2<sup>nd</sup> -year WUT, 3<sup>rd</sup>-year IST, 4<sup>th</sup>-year UNIPI, 5<sup>th</sup>-year UPM).

The database will be integrated into the HySAFE-website by partner FZK.

## Appendix A: Hardcopy of information contained in the database on hydrogen industry organisations
